## New local rules pave way to speedier patent trials

By DAVID KLEINFELD AND JOHN BENASSI

Tuesday, June 12, 2007

One of the first questions a patent-holder faces after deciding it is time to sue an infringer is: "Where should we file?"

For many companies, including many San Diego-based companies, the answer to that question has been to pack the bags and head out of town.

Some plaintiffs, hoping for a quick resolution to their claims, travel to such far-flung jurisdictions as the Eastern District of Texas or the Eastern District of Virginia, both of which are thought to have a 'rocket-docket' for patent cases.

Others, looking for courts they perceive to be more patent-savvy, will head for jurisdictions such as the Northern District of California or the Northern District of Illinois, that have been trying a large volume of patent cases for a couple of decades.

But the calculus is changing, both for San Diego companies and for others, thanks in large part to the Southern District of California's recent adoption of a comprehensive set of local patent-litigation rules and a growing enthusiasm for patent cases among members of the local federal bench.

### New local patent-litigation rules

One of the main objectives of the new patent rules, which have been in force for just over a year, is to provide predictable and uniform treatment for intellectual property litigants and streamline the process by which a patent case is litigated, shortening the time to trial or settlement and thereby reducing costs for all parties involved. To this end, the new rules set up a schedule that will bring the parties to the all-important claim construction (or Markman) hearing approximately nine months after the complaint is filed. Having the Markman hearing as early as practically possible is crucial for litigants seeking a timely resolution because the claim construction order issued by the court after the hearing generally has a profound impact on the rest of the case. The parties will sometimes be inclined to settle once they have seen how the court construes the patent claims at issue. If not, the Markman ruling provides focus for the remaining discovery, dispositive motion practice and trial preparation.

Indeed, it is largely because of the early-scheduled Markman hearing that Southern District judges can now set trial dates for 18 months after complaints are filed. Judge Dana M. Sabraw, who chaired the committee that established the new patent local rules, says: "A majority of the judges of the Southern District are firmly committed to holding claim construction hearings within nine months of the filing of the complaint, and to setting a trial date within 18 months of that filing."

In addition to providing a brisk pace for patent litigation, the new rules also establish orderly, uniform procedures for some of the disclosures and discovery unique to patent lawsuits, bringing the Southern District in line with other jurisdictions such as the Northern District of California and Eastern District of Texas. For example, the patentee's chart "Disclosure of Asserted Claims and Preliminary Infringement Contentions" is due 14 days after the initial CMC. The accused infringer's "Preliminary Invalidity Contentions," accompanied by documents supporting those contentions, are due 60 days later. The parties' first proposed claim constructions follow within a month, and, as in some other jurisdictions, the parties then prepare refined claim charts for submission to the court. Experienced patent litigators used to working in other jurisdictions will likely find these disclosure/discovery rules familiar, predictable and convenient.

The new patent local rules also incorporate an existing feature unique to Southern District litigation practice: the Early Neutral Evaluation (ENE). As local practitioners know, and as out-of-town litigants will learn if they choose to avail themselves of the southern district, the ENE provides the parties with a real opportunity to settle the case before spending substantial time and money. Experienced magistrate judges with the power to compel principals to appear in chambers will try to help the parties reach a deal and will usually remind both sides that it is often wise to settle rather than roll the dice on a jury trial.

### More judges means faster time to trial

Another factor that will likely accelerate time to trial in the Southern District is that after years of suffering a

shortage of seated judges the court finally has a full bench. For many years, the Southern District operated with less than its full complement of judges, was forced to rely on senior judges and was even forced to borrow judges from other districts to fill the void. A litigation backlog was the inevitable result. Thanks to a recent increase in funding, however, since 2003 the Southern District has had its full complement of judges, many of whom are ready and willing to take on patent cases. Sabraw is one of the newly appointed judges, and he says: "My colleagues and I are very interested in patent cases, and are eager to tackle the difficult and challenging issues they present. With Judge Brewster's retirement on the horizon, more of us hope and expect to receive a wider variety of patent cases, and to continue Judge Brewster's thorough and thoughtful treatment of them." Again, we can expect to see faster times to trial as patent cases can now be distributed to more judges.

#### Issa specialized patent docket legislation

Another, even more recent development that may help turn the Southern District into a patent litigation destination is the passage of HR 34 in February. Shepherded through the House of Representatives by congressmen Darrell Issa, R-Calif, (himself an inventor and patent holder) and Adam Schiff, D-Calif., the bill provides a modest-sized pilot program (\$5 million a year for 10 years) to allow select jurisdictions -- the Southern District is a frontrunner to be one of them -- to become more fluent in resolving patent disputes. The legislation encourages judges to opt-in to (or opt-out of) patent cases and provides opt-in judges with funding for educational and professional development and for law clerks with technical backgrounds.

"The prospect of having several judges that are 'experts' in patent law is exciting," says Sabraw. "It would be a great benefit not only to the court, but also to the practitioners and parties that appear in the Southern District."

#### An excellent result for San Diego

Streamlining the local patent-litigation rules and having a greater number of patent-savvy judges on the bench will result in a more efficient and informed federal court in San Diego. As a result, we can expect to see more San Diego companies filing patent cases here in their home court and more out-of-town patent holders making San Diego a destination for the speedy, efficient resolution of their important patent infringement actions. This promises to be an excellent result for both Southern California technology companies and our court system.
